Mofcomp The mode command is available in all versions of Windows, as well as in MS-DOS. Mofcomp The mode command is available in all versions of Windows, as well as in MS-DOS. Mofcomp The mofcomp T
 mofcomp command is available in all versions of Windows. More The more command is used to display the information contained in a text file. The more command is available in all versions of Windows, as well as in MS-DOS. Mount The
 mount command is used to mount Network File System (NFS) network shares. The mount command is available in Windows Vista or Windows 7 but can be enabled by turning on the Services for NFS Windows feature from Programs and Features in Control Panel. The
 mount command is not available in Windows 10 or 8 because Service for UNIX (SFU) was discontinued. Mountvol command is used to display, create, or remove volume mount points. The mountvol command is used to move
 one or files from one folder to another. The move command is also used to rename directories. The move command is available in Windows 10, Windows 8, Windows 8, Windows 10, W
 7, Windows Vista, and Windows XP. Msav The msav command is only available in MS-DOS. Microsoft Antivirus was designed for MS-DOS and Windows XP and later operating systems, and
  third party antivirus tools are available for all versions of Windows. Msbackup command starts Microsoft Backup, a tool used to back up and restore one or more files. The msbackup command is only available in MS-DOS. The msbackup command was replaced with Microsoft Backup beginning in Windows 95 and then Backup and
Restore in later versions of Windows. Mscdex The mscdex command is used to provide CD-ROM access to MS-DOS. Windows provides access to CD-ROM drives for the MS-DOS subsystem beginning in Windows XP, so the mscdex command is unnecessary in this and later
operating systems. Msd The msd command starts Microsoft Diagnostics, a system information tool. The msd command is available in Windows 95. Msg The msg command is available in Windows 10, Windows
8, Windows 7, Windows Vista, and Windows XP. Msiexec Command is available in Windows 10, Windows 7, Windows 7, Windows 7, Windows 7, Windows 7, Windows 7, Windows 10, Windows 10, Windows 10, Windows 11, Windows 11, Windows 12, Windows 13, Windows 14, Windows 16, Windows 17, Windows 18, Windows 18, Windows 19, Windows
 unattended setup process. The muiunattend command is available in Windows 7, and Windows Vista. Nbtstat command is available in all versions of Windows. Net The net command is used to
display, configure, and correct a wide variety of network settings. The net command is available in all versions of Windows 10, Windows 8, Windows 8, Windows 7, Windows Vista, and Windows XP. The net command is available in all versions of windows 10, Windows 10, Windows 10, Windows 10, Windows 10, Windows 11, Windows 11, Windows 12, Windows 12, Windows 13, Windows 14, Windows 14, Windows 15, Windows 16, Windows 17, Windows 18, Windows 18, Windows 18, Windows 19, Window
 that utilized the command. Netcfg The netcfg command is used to install the Windows Preinstallation Environment (WinPE), a lightweight version of Windows 7, and Windows Vista. Netsh The netcfg command is used to start Network Shell, a command
line utility used to manage the network configuration of the local, or a remote, command is available in Windows 7, Windows 7, Windows 7, Windows 7, Windows 8, Windows 7, Windows 10, Win
 feature from Programs and Features in Control Panel. The nfsadmin command is not available in Windows 10 or 8 because Service for UNIX (SFU) was discontinued. Nlsfunc command is available in MS-DOS as well as in all 32-bit versions of
 Windows. The nlsfunc command is not available in 64-bit versions of Windows. Nlsfunc is only available in Windows to test secure channels between Windows computers in a domain and between domain controllers that are trusting other domains. The nltest
  command is available in Windows 10, Windows 8, and Windows 7. Nslookup The nslookup is most command queries your configured DNS server to discover the IP address. The nslookup command is available in Windows 10, Windows 7, Windows 7, Windows Vista, and
 Windows XP. Ntbackup The ntbackup command is available in Windows XP. The ntbackup command was replaced with the wbadmin beginning in Windows Vista. Ntsd The ntsd command is used to perform certain
command line debugging tasks. The ntsd command is available in Windows XP. The ntsd command was removed beginning in Windows Vista due to the addition of dump file support in Task Manager. Ocsetup Command was removed beginning in Windows Vista due to the addition of dump file support in Task Manager. Ocsetup Command was removed beginning in Windows Vista due to the addition of dump file support in Task Manager.
 is available in Windows 8, Windows 8, Windows 7, and Windows Vista. Beginning in Windows 8, Wicrosoft is depreciating the ocsetup command in favor of the dism command is available in Windows 10, Windows 8, Windows 7, Windows 7, Windows 10, Window
 Vista, and Windows XP. Path The path command is used to display or set a specific path available in all versions of Windows, as well as in MS-DOS. Pathping The path command is available in all versions of Windows, as well as in MS-DOS. Pathping The path command is available in all versions of Windows, as well as in MS-DOS. Pathping The path command is available in all versions of Windows, as well as in MS-DOS. Pathping The path command is available in all versions of Windows, as well as in MS-DOS. Pathping The path command is available in all versions of Windows, as well as in MS-DOS. Pathping The path command is available in all versions of Windows, as well as in MS-DOS. Pathping The path command is available in all versions of Windows, as well as in MS-DOS. Pathping The path command is available in all versions of Windows, as well as in MS-DOS. Pathping The path command is available in all versions of Windows, as well as in MS-DOS. Pathping The pathping The path command is available in all versions of Windows, as well as in MS-DOS. Pathping The pathping The pathping The path command is available in all versions of Windows, as well as in MS-DOS. Pathping The pathping T
The pathping command is available in Windows 7, Windows 8, Windows 7, Windows 7, Windows 7, Windows 7, Windows 8, Windows 7, Windows 8, Windows 10, Windows 11, Windows 11, Windows 11, Windows 12, Windows 13, Windows 14, Windows 14, Windows 15, Windows 16, Windows 17, Windows 18, Windows 18, Windows 19, Wi
in all versions of Windows, as well as in MS-DOS. Pentnt The pentnt command is used to detect floating point division errors in the Intel Pentium chip. The pentnt command is also used to enable floating point division errors in the Intel Pentium chip. The pentnt command is also used to detect floating point division errors in the Intel Pentium chip. The pentnt command is also used to enable floating point division errors in the Intel Pentium chip.
in Windows Vista due to the lack of Intel Pentium CPU use at the time of this operating system release. Ping The ping command sends an Internet Control Message Protocol (ICMP) Echo Request message to a specified remote computer to verify IP-level connectivity. The ping command is available in all versions of Windows. Pkgmgr The pkgmgr
command is used to start the Windows Package Manager from the Command Prompt. Package Manager installs, uninstalls, uninstalls
 installation of hardware device drivers. The pnputil command is available in Windows 10, Windows 8, Windows 8, Windows 8, Windows 8, Windows 8, Windows 8, Windows 10, Windows
 7, and Windows Vista. Popd The popd command is used to change the current directory to the one most recently stored by the pushd command is available in Windows 8, Windows 8, Windows 7, Windows Vista, and Windows XP. Power The power
 command is used to reduce the power consumed by a computer by monitoring software and hardware devices. The power command is available in Windows 98 and 95, as well as in MS-DOS. The power command was replaced by operating system integrated power management functions beginning in Windows XP. Powercfg The powercfg command is
used to manage the Windows power management settings from the command line. The print command is available in Windows XP. Print The print command is available in all versions of Windows, as well
as in MS-DOS. Prompt The prompt command is used to customize the appearance of the prompt text in Command Prompt or MS-DOS. Pushd The pushd command is used to store a directory for use, most commonly from within a batch or script program. The pushd
command is available in Windows 10, Windows 10, Windows 7, Windows 10 and 8. Qappsrv The qappsrv Command is used to display all Remote Desktop
Session Host servers available on the network. The qappsrv command is available in Windows 7, Windows 7, Windows 7, Windows 7, Windows 7, Windows 7, Windows 8, Windows 7, Windows 7, Windows 8, Windows 8, Windows 8, Windows 10, Windows
 as in MS-DOS. The ghasic command is not installed by default with Windows 98 or 95 but is available from the installation disc or disks. Oprocess Command is available in Windows 8, Windows 8, Windows 7, Windows Vista, and Windows XP. Query The
 query command is used to display the status of a specified service. The query command is available in Windows 7, and Windows 8, Windows 7, and Windows 8, Windows 7, and Windows 8, Windows 7, and Windows 10, Win
 Vista. Qwinsta The qwinsta command is used to display information about open Remote Desktop Sessions. The qwinsta command is available in Windows 8, Windows 8, Windows 8, Windows 8, Windows 8, Windows 10, Windows 10, Windows 10, Windows 10, Windows 10, Windows 10, Windows 11, Windows 11, Windows 12, Windows 11, Windows 12, Windows 13, Windows 14, Windows 14, Windows 15, Windows 16, Windows 17, Windows 18, Windows 18, Windows 19, Windo
 Windows 10, Windows 8, Windows 7, Windows 7, Windows 7, Windows 7, Windows 7, Windows 8, Windows 7, Windows 8, Windows 7, Windows 8, Windows 7, Windows 8, Windows 8, Windows 8, Windows 10, Windows 8, Windows 10, Windows 10

command is available in Windows 10, Windows 8, Windows 7, Windows 8, Windows 7, Windows Vista, and Windows XP. Sc The sc command is available in Windows 10, Windows 8, Windows 7, Windows Vista, and Windows XP. Scandisk The
scandisk command is used to start Microsoft ScanDisk, a disk repair program. The scandisk command was replaced by the chkdsk command was replaced by the chk
backup utility. The scanreg command is available in Windows 98 and Windows 98 and Windows Registry functions. Schtasks The scanreg command is used to schedule specified programs or commands to run at certain times.
The schtasks command can be used to create, delete, query, change, run, and end scheduled tasks. The schtasks command is available in Windows 10, Windows 8, Windows 8, Windows 7, Windows 8, Windows 8, Windows 10, Windows 1
 Windows 7, Windows Vista, and Windows XP. Secedit Command is used to configure and analyze system security by comparing the current security b
disable environment variables in MS-DOS or from the Command is available in all versions of Windows, as well as in MS-DOS. Setlocal command is available in Windows 10, Windows 8, Windows 7,
Windows Vista, and Windows XP. Setspn The setspn command is used to manage the Service Principal Names (SPN) for an Active Directory (AD) service account. The setspn command is used to manage the Service Principal Names (SPN) for an Active Directory (AD) service account.
 setver command is available in MS-DOS as well as in all 32-bit versions of Windows. The setx command is not available in 64-bit versions of Windows 10, Windows 8, Windows 7,
and Windows Vista. Sfc The sfc command is used to verify and replace important Windows 8, Windows 7, Windows 7, Windows 7, Windows 7, Windows 7, Windows 7, Windows 8, Windows 7, Windows 7, Windows 7, Windows 8, Windows 8
shadow command is used to monitor another Remote Desktop Services session. The share command is available in Windows 7, Windows Vista, and Windows V
share command is not available in 64-bit versions of Windows. Share is only available in Windows, as well as in MS-DOS. Showmount
The showmount command is used to display information about NFS mounted file systems. The showmount command is not available in Windows 7 and Windows 8 and 2 and
Control Panel. The showmount command is not available in Windows 10 or 8 because Service for UNIX (SFU) was discontinued. Shutdown Command is available in Windows 10, Windows 8, Windows 7, Windows Vista, and
Windows XP. Smartdry The smartdry command installs and configures SMARTDrive, a disk caching utility for MS-DOS. The smartdry command is available in Windows XP, making the smartdry command is used to read data from a
specified input, sort that data, and return the results of that sort to the Command Prompt screen, a file, or another output device. The start command is used to open a new command line window to run a specified program or command. The start command can also
be used to start an application without creating a new window. The start command is a lot like the net use command is used to associate a local path with a drive letter. The subst command is available in
all versions of Windows, as well as in MS-DOS. The subst command replaced the assign command beginning with MS-DOS 6.0. Sxstrace command is available in Windows 10, Windows 8, Windows 7, and Windows Vista. Sys The sys
command is used to copy the MS-DOS system files and command is available in Windows 98 and 95, as well as in MS-DOS. The sys command is available in Windows are too large to fit on a disk, so the sys command was removed
beginning in Windows XP. Systeminfo command is used to display basic Windows 7, Windows 7, Windows Vista, and Windows XP. Takeown The takedown command is used to regain access to a file that that an
  administrator was denied access to when reassigning ownership of the file. The takeown command is available in Windows 10, Windows 8, Windows 8, Windows 7, and Windows 10, Windows 7, and Windows 10, Windows 10,
taskkill command is available in Windows 10, Windows 8, Windows 7, Windows 8, Windows 7, Windows 8, Windows 7, Windows 7, Windows 8, Windows 7, Windows 8, Windows 8,
Tcmsetup The tcmsetup command is used to set up or disable in Windows 7, Windows 8, Windows 7, Windows 8, Windows 8, Windows 10, Window
command is available in all versions of Windows. The telnet command is not available by default in Windows feature from Programs and Features in Control Panel. Tftp The tftp command is used to transfer files to and from a remote computer that's running the Trivial File
Transfer Protocol (TFTP) service or daemon. The tftp command is available in Windows 8, 7, or Vista, but can be enabled by turning on the TFTP Client Windows feature from Programs and Features in Control Panel. Time The time
command is used to show or change the current time. The time command is available in all versions of Windows, as well as in MS-DOS. Timeout command is typically used in a batch or script file to provide a specified timeout command is
available in Windows 10, Windows 8, Windows 7, and Windows 7, Windows 8, Windows 7, Windows 8, Windows 8, Windows 8, Windows 8, Windows 8, Windows 8, Windows 10, Windows 1
Server. The tlntadmn command is available in Windows 8, Windows 7, Windows 7, Windows 7, Windows 7, Windows 7, Windows 7, Windows 8, 7, or Vista, but can be enabled by turning on the Telnet Server Windows 8, 7, or Vista, but can be enabled by turning on the Telnet Server Windows 8, 7, or Vista, but can be enabled by turning on the Telnet Server Windows 8, 7, or Vista, but can be enabled by turning on the Telnet Server Windows 8, 7, or Vista, but can be enabled by turning on the Telnet Server Windows 8, 7, or Vista, but can be enabled by turning on the Telnet Server Windows 8, 7, or Vista, but can be enabled by turning on the Telnet Server Windows 8, 7, or Vista, but can be enabled by turning on the Telnet Server Windows 8, 7, or Vista, but can be enabled by turning on the Telnet Server Windows 8, 7, or Vista, but can be enabled by turning on the Telnet Server Windows 8, 7, or Vista, but can be enabled by turning on the Telnet Server Windows 8, 7, or Vista, but can be enabled by turning on the Telnet Server Windows 8, 7, or Vista, but can be enabled by turning on the Telnet Server Windows 8, 7, or Vista, but can be enabled by turning on the Telnet Server Windows 8, 7, or Vista, but can be enabled by turning on the Telnet Server Windows 8, 7, or Vista, but can be enabled by turning on the Telnet Server Windows 8, 7, or Vista, but can be enabled by turning on the Telnet Server Windows 8, 7, or Vista, but can be enabled by turning on the Telnet Server Windows 8, 7, or Vista, but can be enabled by turning on the Telnet Server Windows 8, 7, or Vista, but can be enabled by turning on the Telnet Server Windows 8, 7, or Vista, but can be enabled by turning on the Telnet Server Windows 8, 7, or Vista, but can be enabled by turning on the Telnet Server Windows 8, 7, or Vista, but can be enabled by turning on the Telnet Server Windows 8, 7, or Vista, but can be enabled by turning on the Telnet Server Windows 8, 7, or Vista, but can be enabled by turning on the Telnet Server Windows 8, 7, or Vista, but can be enabled by tur
 used to create and destroy TPM virtual smart cards. The tracerpt command is available in Windows 8. Tracerpt command is available in Windows 7, Windows 7, Windows 7, Windows 7, Windows 8, Windows 8, Windows 10, Windows 10, Windows 10, Windows 11, Windows 11, Windows 12, Windows 13, Windows 14, Windows 14, Windows 15, Windows 16, Windows 17, Windows 18, Windows 18, Windows 19, Windows 19,
The tracert command sends Internet Control Message Protocol (ICMP) Echo Request messages to a specified remote computer with increasing Time to Live (TTL) field values and displays the IP address and hostname, if available, of the router interfaces between the source and destination. The tracert command is available in all versions of Windows.
Tree The tree command is used to graphically display the folder structure of a specified drive or path. The tree command is available in Windows 10, Windows 8, Windows 7,
 Windows Vista, and Windows XP. Tsdiscon The tsdiscon command is used to disconnect a Remote Desktop session. The tsdiscon command is available in Windows 10, Windows 8, Windows 8, Windows 10, Window
Windows 7, Windows Vista, and Windows XP. Tsshutdn command is available in the more powerful shutdown command, so tsshutdn was removed beginning in Windows Vista
Type The type command is used to display the information contained in a text file. The type command is available in all versions of Windows, as well as in MS-DOS. Typeperf Command is available in Windows
 10, Windows 8, Windows 7, Windows 7, Windows 7, Windows 7, Windows 7, Windows 8, and Windows 7. Umount The umount command is available in Windows 8, and Windows 7. Umount The umount command command is available in Windows 8, and Windows 7. Umount The umount command command is available in Windows 8, and Windows 8, and Windows 7. Umount The umount command command is available in Windows 8, and 
is used to remove Network File System (NFS) mounted network shares. The umount command is available in Windows Vista or Windo
umount command is not available in Windows 10 or 8 because Service for UNIX (SFU) was discontinued.
